Problem Statement

- Users face challenges in finding a collaborative platform that effectively integrates:
 - - Seamless communication features
 - - AI-driven insights for smarter decision-making
 - - Intuitive design for ease of use
- Existing solutions often fall short in:
 - - Promoting knowledge sharing among users
 - - Encouraging meaningful discussions
- As a result, users lack the necessary tools to:
 - - Organize their ideas efficiently
 - - Streamline their learning processes
- This highlights a significant need for a comprehensive platform that:
 - - Boosts productivity
 - - Fosters academic excellence through enhanced collaboration and resource sharing.

Solution Approach

Real-Time Collaboration and Communication

- Live chat and video calls for discussions, brainstorming, and team learning.
- Instant messaging, annotations, and co-editing to enhance teamwork.

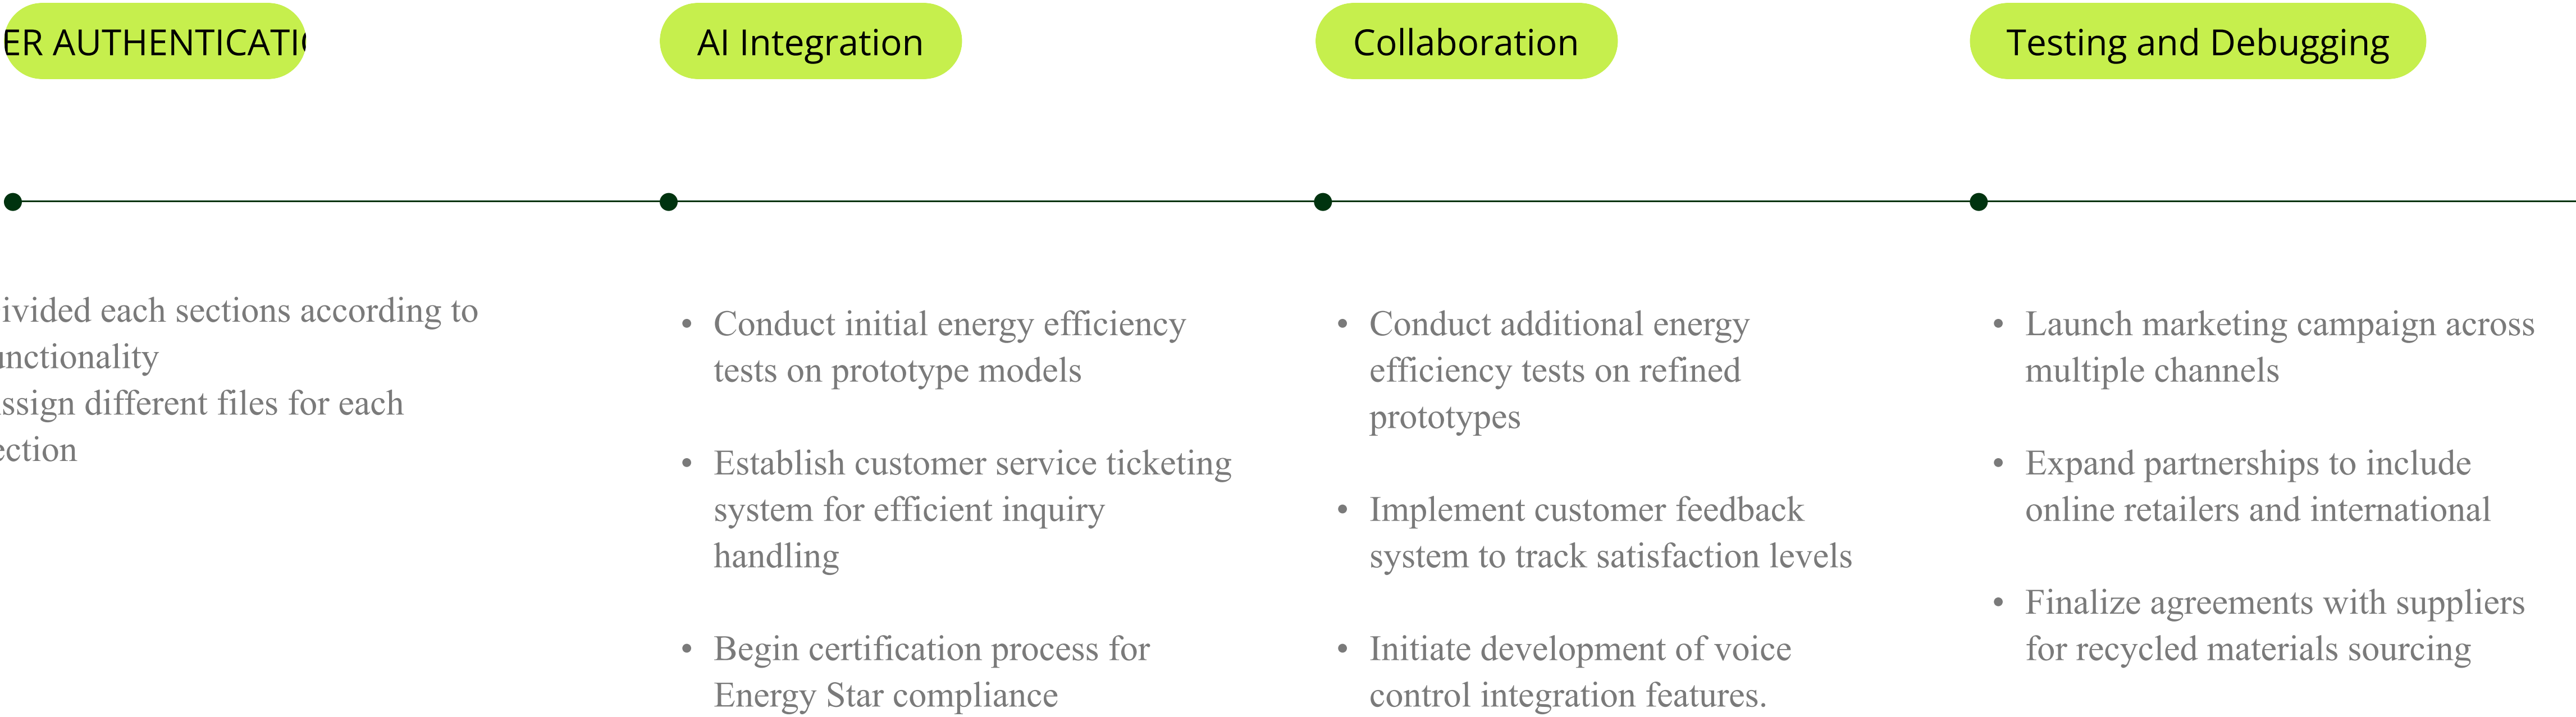

Content Sharing and Management

- Upload and share educational materials, question papers, and brainstorming artifacts.
- Save content from websites with automatic categorization and tagging

AI-Powered Tools

- Summaries: Create concise summaries of documents.
- Quiz Generation: Make quizzes for self-assessment.
- Focus Area Extraction: Identify key questions and categorize them.

Modules

Tech Stack

FRONTEND

React js

React.js is a powerful JavaScript library used for building user interfaces.

Scad/cn

Frontend component Library

BACKEND

Node Js

JavaScript runtime for server-side applications.

Express Js

Web application framework for Node.js that simplifies server-side development by providing robust features for building web applications.

API

Gemini API

AI-powered text and media processing.

Auth0

Auth0 enables secure user authentication and authorization.
