

1	What is a human centred system? List out the different methods for observing human experience. Human-centered design (HCD) is a creative problem-solving approach that puts people first by prioritizing their needs, wants, and experiences throughout the entire design process.	3
2	How do researchers ensure that the work activity data elicited through contextual inquiry is accurate and representative of real-world scenarios?	3
3	What are the benefits and challenges of interviewing approaches to understanding human experience?	3
4	What are the key principles of participatory research?	3
5	How does a heuristic review formulate and evaluate solutions for designing a human centred system?	3
6	How does contextual inquiry differ from traditional methods of gathering work activity data?	3
7	How does walk-a-mile immersion enhance our understanding of human experiences in various contexts? Explain with an example.	7
	Explain the concept of participatory research and its role in observing human experience.	7
8	Explain the concept of contextual inquiry and its role in observing human experience.	7
	How does interviewing enhance our understanding of human experiences in various contexts? Explain with an example.	7
9	What is the significance of observing human experience in the design and development of products, services and systems?	7
	Differentiate between ethnographic research and participatory research.	7
10	Explain the concept of evaluative research and its role in observing human experience.	7
	How does fly-on-the-wall observation enhance our understanding of human experiences in various contexts? Explain with an example.	7
11	What are the key techniques involved in conducting effective interviews for gathering insights into human experiences?	7
	How does critique enhance our understanding of human experiences in various contexts? Explain with an example.	7

12	How does ethnographic research contribute to understanding human experiences?	7
	Differentiate between ethnographic research and evaluative research.	7

MODULE 1

MODULE 2

1	What are the key patterns and priorities to consider when analyzing challenges and opportunities?	3
2	What is the role of people and systems in contextual analysis?	3
3	How does contextual analysis contribute to a deeper understanding of work practices within real world contexts?	3
4	Define WAAD.	3
5	How can bull's eye diagramming be used in finding patterns and determining prioritization?	3
6	What is persona profile?	3
7	Explain any two methods that will help in developing your ability to support all people and systems.	6
	Explain the different methods used in finding patterns and determining prioritization.	8
8	List and explain methods that will help you to think differently by enabling you to ask differently.	7
	Explain data interpretation in contextual analysis.	7
9	Describe concept mapping. Explain with an example.	7
	Explain stakeholder mapping with an example.	7
10	Explain the concept of contextual analysis.	10
	Describe experience diagramming.	4
11	Explain the construction of work activity affinity diagrams from work activity notes.	7
	Explain how to synthesize and manage work activity notes from raw contextual data	7
12	Explain different methods that will help in developing your ability to support all	10

	people and systems.	
	Explain importance matrix.	4

MODULE 3

1	What are Interaction Design Requirements?	3
2	List and define the three design informing models.	3
3	Explain about the information object model and its key components.	3
4	List the use of design informing models.	3
5	Define Social model.	3
6	Define work roles, user classes and user personas in the user model.	3
7	Explain the flow model with an example.	6
	Explain model consolidation with key steps involved in it.	8
8	Explain the Artifact Model with an example.	7
	Explain the Physical Model with an example.	7
9	Explain the general “How to” suggestions for constructing design informing models.	7
	Explain the structure of the requirement statement in the requirement extraction phase with example.	7
10	List and explain abridged methods for design informing model extraction.	10
	Describe the Roots of essential use cases in software use cases.	4
11	Explain the relationships among work roles, sub-roles, and user class characteristics.	4
	Define task model. Explain the different task models.	10
12	Explain how we could bridge the gap between Analysis and Design.	7
	Explain work environment models with examples.	7

MODULE 4

1	What is a design rationale, and why is it important in the design process?	3
2	Differentiate design and development.	3
3	Define the term "design paradigm" and explain its significance in Human-Computer Interaction (HCI).	3
4	What is ideation in design?	3
5	What is the primary purpose of sketching in the design process?	3
6	Explain the process of alternative worlds in concept ideation.	3
7	Illustrate the effectiveness of design thinking in addressing complex societal challenges, citing examples from both successful and unsuccessful implementations.	8
	Explain the different methods in design rationale.	6
8	Explain the different methods in concept ideation.	7
	Critically assess the limitations of relying on user personas in design projects, considering factors such as bias, evolving user needs, and cultural diversity.	7
9	Explain the different design paradigms.	7
	Discuss how the different design perspectives are applied in UX design with the help of a real world scenario.	7
10	Discuss the methods involved in modeling and prototyping to explore and refine design concepts for future scenarios?	7
	Explain the different design perspectives.	7
11	What is sketching? Explain essential concepts in sketching.	6
	Apply the role of psychological factors such as cognitive biases and creativity inhibitors in shaping the ideation process, proposing strategies for mitigating their effects.	8
12	Compare rough & ready prototyping with appearance modeling. How does each contribute to the product development process?	7
	Explain how the three design paradigms can be applied in the creation of user interfaces that are both functional and user-friendly. Provide examples to support your points.	7

MODULE 5

1	Explain how metaphors can be used to formulate a conceptual design with suitable examples.	3
2	What is ubiquitous computing, and how does it differ from traditional computing?	3
3	What is a prototype in design? Why is prototyping important in interaction design?	3
4	Define prototype fidelity and discuss the impact of fidelity on user feedback and design iteration.	3
5	Discuss the concept of slanty design and its impact on user behavior with suitable examples.	3
6	Name three popular modern software tools used for prototyping.	3
7	a) Explain the conceptual design from three design perspectives with the help of examples.	9
	b) Explain the importance of between-frame transitions.	5
8	a) Discuss how embedded computing and ambient intelligence contribute to ubiquitous interaction. Provide real-world applications.	7
	b) Discuss the advantages of prototyping in system design. How does it benefit both designers and users?	7
9	a) Discuss the depth and breadth of a prototype with examples of different prototyping techniques. How do they impact usability testing?	8
	b) Explain embodied interaction and its significance in human-centered design. How does it enhance user experience?	6
10	a) Explain the different levels of fidelity in prototypes with examples.	7
	b) Discuss mental models. How do the designer's mental model and the user's mental model differ? Explain with examples.	7
11	a) Describe paper prototypes. How do paper prototypes contribute to early-stage usability testing? Explain with examples.	6
	b) Explain the different types of interactive prototypes with examples.	8
12	a) What software tools are commonly used for prototyping, and what are their key features and functionalities?	7
	b) How do prototypes transition from the design phase to becoming a final product, and what challenges may arise during this transition?	7
